Subject: Bachman Fire Water - OCC
Date: 08/03/2012 09:45 AM

Jhana-

I visited with Tim Baker who is the Pollution Abatement lead for OCC this morning. Though, I called him for another reason he indicated that he was working the water issue at Bachman. He indicated that the facility had originally asked OCC if they could dispose of the water down a Class 2 injection well. He advised them that since the water was not associated with a production well it could not. The company has since asked about using the water in a frac job. He has been in contact with Carla Hayes (Bachman) and she has shared the analytical with him. I told Tim that we wanted to make sure that someone was providing oversight for the "proper" use/disposal of the water. He indicated that if Bachman choose to use the water in the frac job that OCC would be involved. He also said that should the company take a different approach he would let us know.
